ACM - Amiga C Manual

Anders Bjerin

Book Two

Part IV: Appendices

http://aminet.net/package/dev/c/ACM

The complete boiled-down C manual for the Amiga which describes how to open and work with Screens, Windows, Graphics, Gadgets, Requesters, Alerts, Menus, IDCMP, Sprites, VSprites, AmigaDOS, Low Level Graphics Routines, Hints and Tips, etc. The manual also explains how to use your C Compiler and gives you important information about how the Amiga works and how your programs should be designed. The manual consists of 15 chapters together with more than 100 fully executable examples with source code.

A. EXAMPLES

A.1 SCREENS

Example1

This program will open a low-resolution, non-Interlaced, eight colour Custom Screen. It will display it for 30 seconds, and then close it.

Example4

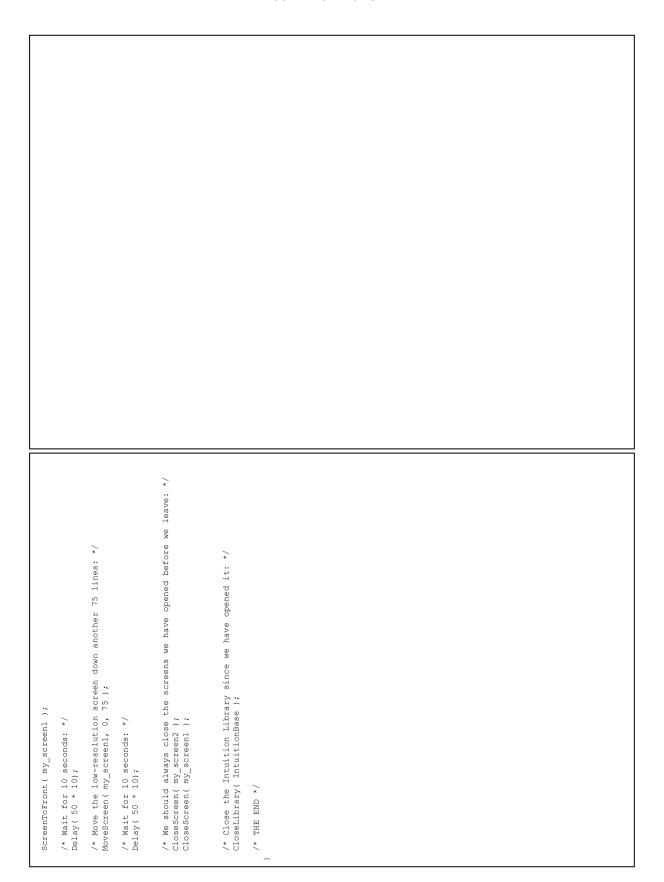

This program will open two screens, one (low-resolution 32 colours) at the top of the display, and one (high-resolution 16 colours) a bit down.

```
/\star We should always close the screens we have opened before we leave: ^\star/

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            main()
```

Example5

Same as Example4 except that after 10 seconds the low-resolution screen will move down 75 lines. After another 10 seconds it will be put in front of all other screens. 10 seconds later it will move down another 75 lines. The program will wait 10 seconds before the screens are closed and the program exits.

```

Example6

This program will open a low-resolution, non-Interlaced, 4 colour Custom Screen. It will after 5 seconds start to change the screens colours, and will after a while close the screen and exit.

```
/* The "(struct Screen *)" is not necessary but it tells the compiler */ /* that the function OpenScreen() returns a pointer to a Screen */ /* structure. (See chapter "Amiga C" for more information) */

```

A.2 WINDOWS

Example1

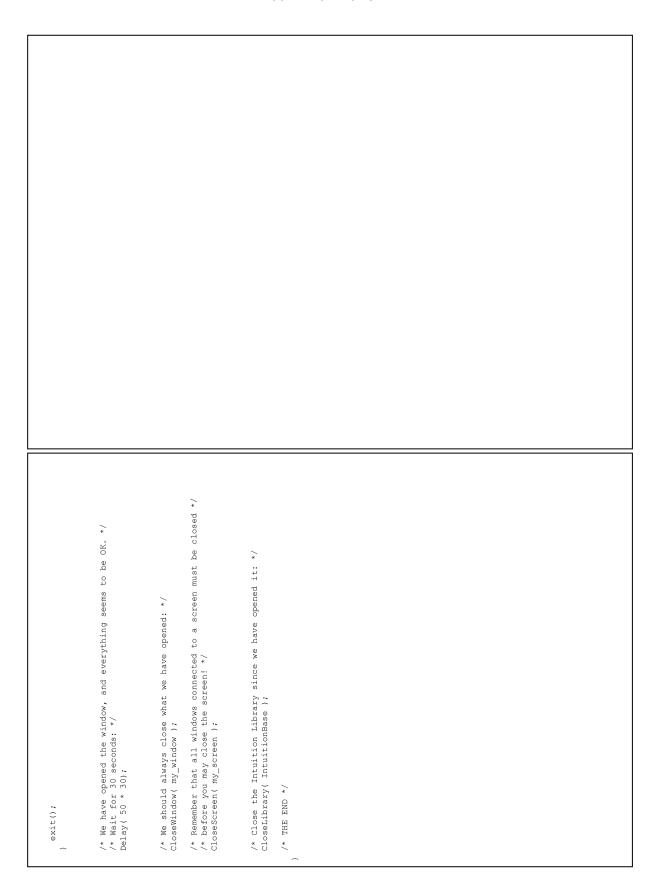

This program will open a normal window which is connected to the Workbench Screen. It will display it for 30 seconds, and then close it.

```

Example2

This program will open a high resolution 16 colour Custom Screen and a normal window which is connected to it. It will display it for 30 seconds, and then close the Custom Screen and the window.

```
We will later connect it to the screen. */ No Custom BitMap. */ We do not need to care about these */ since we havent supplied the window with */
                                                                                                                                                    Connected to the Workbench Screen. */

Example3

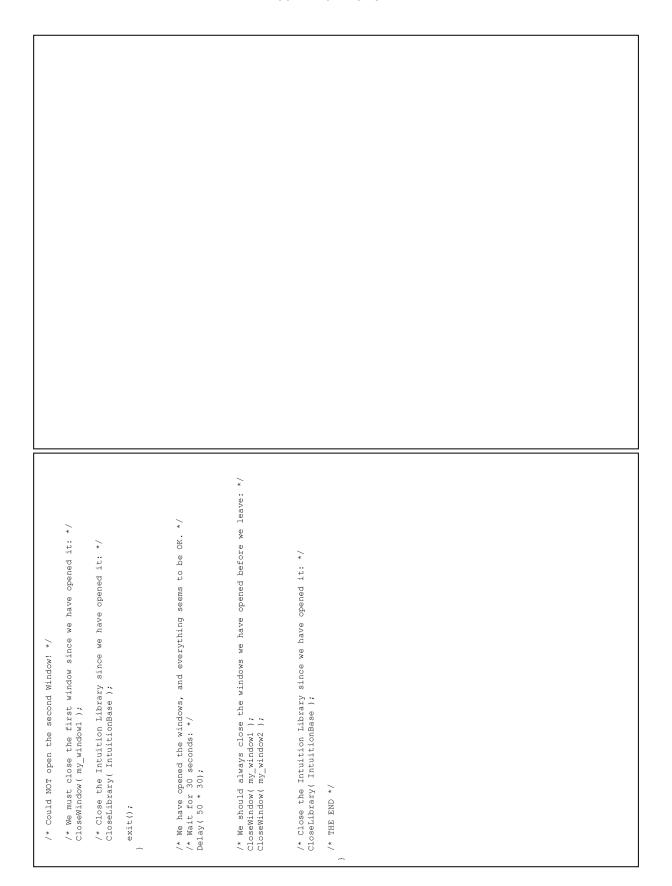

This program will open a normal window which is connected to the Workbench Screen. The window will use all System Gadgets, and will automatically Activate the window. It will display it for 30 seconds, and then close it. (Remember that the Close Gadget does NOT close the window by itself, it will only inform you that the user wants to close it. But in this example we will not listen to what the user wants.)

```

Example4

This program will open two normal windows which are connected to the Workbench Screen. The windows will use all System Gadgets. It will display them for 30 seconds, and then close them.

```

Example6

Same as Example5 except that the window will also use all System Gadgets.

```
/* We should always close the windows we have opened before we leave: */ <code>CloseWindow( my_window );</code>
                                                                                                                                                                                                                                                                                                                                                                                                                                           *

```

Example7

This program will open three windows, two are normal and the third is a Backdrop window. The windows will use all System Gadgets, except the Backdrop window, which only can use the close-window gadget. After 30 seconds the program quits. (Try to push either window 1 or 2 behind the Backdrop window.)

```

Example8

This program will open a SuperBitMap window which is connected to the Workbench Screen. Since it is a SuperBitMap we also make the window into a Gimmezerozero window. The window will use all System Gadgets, and some boxes will be drawn. It will display the window for 30 seconds, and then close it. (Shrink the window, and then enlarge it again, and you will noticed that the lines are still there!)

```
/* &my_bitmap: A pointer to the my_bitmap structure. */
/* DEPTH: Number of bitplanes to use. */
/* WIDTH: The width of the BitMap. (Must be a multiple of 16) */
/* HEIGHT: The height of the BitMap. */
                                               Connected to the Workbench Screen. */
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /* Close the Intuition Library since we have opened it: */ CloseLibrary( IntuitionBase );

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           returns an APTR (memory pointer). It is actually no difference between them, but two different names (declarartions) makes the paranoid C compiler worried. To calm it down we make this "casting"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    memory pointer to some display memory (PLANEPIR), while AllocRaster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The memory we allocated for the Bitplanes, is normaly "dirty", and therefore needs cleaning. We can here use the Blitter to clear the memory since it is the fastest way to do it, and the easiest. RASSIZE is a macro which calculates memory size for a Bitplane of the size WIDTH x HEIGHT. We will later go into more details about
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /st 6. Make sure the NewWindow's BitMap pointer is pointing to your st/
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The (PLANEPTR) is not necessary, but you will now not recieve any
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           warnings messages about "pointers do not point to same type of

                                                                                                                                                                                                                                                                                                                                                                               main()
                                                                                                                                                                                                                                                                                       :
```

A.3 GRAPHICS

Example1

This program will open a normal window which is connected to the Workbench Screen. We will then draw a strange line with help of Intuition's Border structure.

```
/* FrontPen, colour register 3. */
/* BackPen, for the moment unused. */
/* DrawMode, draw the lines with colour 3. */
/* DrawMode, pair of coordinates in the array. */
/* XY, poincer to the array with the coordinates. */
/* NextBorder, no other Border structures are connected. */
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /* We should always close the windows we have opened before we leave: */ <code>CloseWindow(m_{\rm Y}\_window);</code></code>

```

Example2

This program will open a normal window which is connected to the Workbench Screen. We will then draw two rectangles with different colours. This shows how you can link Border structures to each other in order to get the desired effects.

/* Could NOT open the Window! */
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /* Wait for 30 seconds: */
Delay( 50 * 30);
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /* THE END */
```

Example3

This program will open a normal window which is connected to the Workbench Screen. We will then print a text string with help of Intuition's IntuiText structure.

```
/* We should always close the windows we have opened before we leave: */ <code>CloseWindow(</code> my window );
/* IText, the text that will be result.................../* (Remember my_text = &my_text[0].) */
/* NextText, no other IntuiText structures are connected. */
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               *
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /* Close the Intuition Library since we have opened it: */

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1,
```

Example5

This program will open a normal window which is connected to the Workbench Screen. We will then draw the little nice arrow we talked so much about.

```
/* LeftEdge, TopEdge. */
/* Width, 7 pixels/bitts wide. */
/* Height, 8 lines high. */
/* Depth, only one Bitplane. */
/* Inagebate, pointer to my_image data. */
/* PickPlane, bitplane Zero_affects. */
/* PlaneOnOff, 0's on all other Bitplanes. */
/* The pixels' colour will be either 0000 (blue) or */
/* O001 (white).] */
/* NextImage, no more Images. */
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /* We should always close the windows we have opened before we leave: */ <code>CloseWindow(m_{\rm Y}\_window);</code></code>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               OK.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /* We will now try to open the window: */ \rm my\_window= (struct Window *) OpenWindow( &my\_new\_window );

Example6

Same as Example5 except that we will draw it several times in different colours. This shows how PlanePick/PlaneOnOff works.

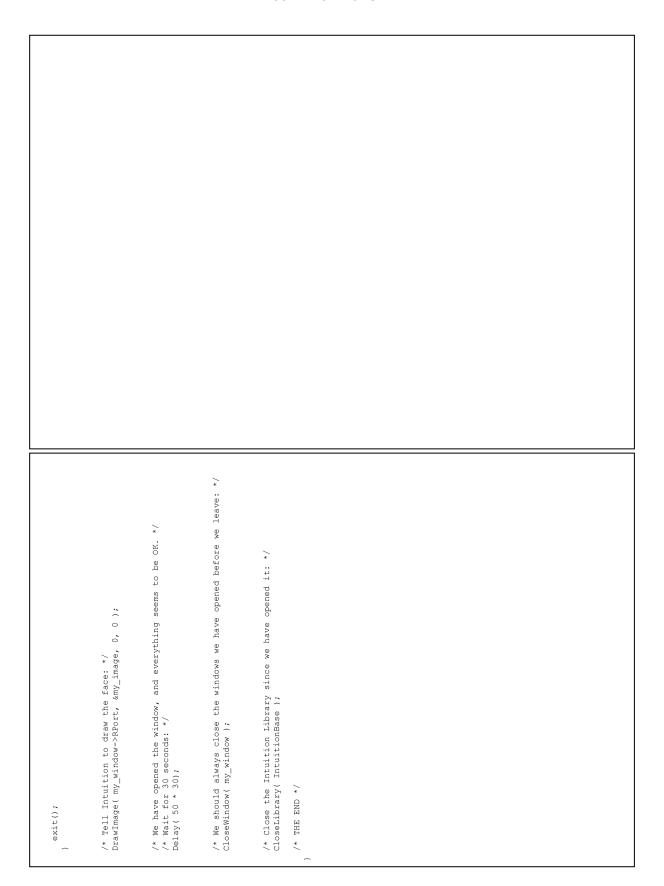

```
/* Depth. or Jane 1391.
/* ImageData, pointer to my_image_data. */
/* PickPlane, bitplane One affects. */
/* PlaneOnOff, 0's on all other Bitplanes. */
/* [The pixels' colour will be either 0000 (0:blue) or */
/* 0010 (2:black).] */
/* NextImage, linked to my_image3. */
                                                                                                                                                                                                                        /* ImageData, pointer to my_image_data. */
/* ImageData, pointer to my_image_data. */
/* PickPlane, bitplane Zero affects. */
/* PlaneOnOff, Bitplane One will be filled with 1's. */
/* [The pixels' colour will be either 0010 (black) or */
/* 0011 (carage).] */
/* NextImage, last structure in the list. */

```

Example7

This program will open a normal window which is connected to the Workbench Screen. We will then draw the nice 4 colour face that was described in chapter $3.5\,$ IMAGES.

```
/* LeftEdge, TopEdge. */
/* Width, 9 pixels/bitts wide. */
/* Height, 13 lines high. */
/* Depth, two Bitplanes, 4 colours. */
/* ImageData, pointer to my_image_data. */
/* PickPlane, bitplane Zero and One affects. */
/* PlaneOnOff, all Bitplanes are already "picked". */
/* NextImage, no more Images. */
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /* We will now try to open the window: */ \rm my\_window = (struct Window *) openWindow( $my\_new\_window );

Example8

This program will open a normal window which is connected to a $16\text{-}\mathrm{colour}$ Custom screen. In the window we will draw the famous AMIGA-logo.

```
Title of the window. */ We will later connect it to the screen. */ No Custom BitMap. */
                                                                                                           We do not need to care about these ^{\star}/ since we have not supplied the window ^{\star}/
     CheckMark (v).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           OXFFFF, OXFFFG, OX101F, OX07FC, OX007E, OX0030, OX01F8, OX007F, OXF83F, OXFFFF, OXFFFE, OXFEG, OXF03F, OX07FE, OX007E, OX0078, OX03E0, OXF83F,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      opened it:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              we have opened it:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Depth, four Bitplanes, 16 colours.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Close the                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0x0000,0x00F8,0xF800,0x0000,0x0000,0x0000,0x0000,0x0000,0x0000,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0x0000,0x0F8F,0x8000,0x0000,0x0000,0x0000,0x0000,0x0000                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0x0000,0x0000,0x0000,0x0000,0x0000,0x0000,0x0000,0x0000,0x0000,  ```

A.4 GADGETS

Example1

This program will open a normal window which is connected to the Workbench Screen. The window will use all System Gadgets, and will close first when the user has selected the System gadget Close window. (Same as Example3 in chapter 2 WINDOWS, except that we have added an IDCMP check on the Close window gadget.)
