A.7 MENUS

Example1

This program opens a normal window to which we connect a menu strip. The menu consists of four items: Plain, Bold, Underlined and Italic. The user can select either Plain or a combination of the other styles. (If the user selects Plain all other modes will be mutual excluded, but if the user on the other hand selects Bold, Underlined or Italic, only the Plain option will be mutual excluded.

This example also shows how a program should handle the IDCMP flags, and how to collect several messages from one single menu event.

```
0x00000001, /* MutualExclude, mutualexclude the first item only. */
(APTR) &my_third_text, /* ItemFill, pointer to the text. */
| X SelectFill, nothing since we complement the col. */
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   complement the colours when highlihted. */
                                                                                                                                                                                                                                                                                                                   /* FrontPen, black. */

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         exit();
```

Example2

This example is very similar to Example1, but we have this time put the edit styles in a subitem box which is connected to the one and only item box called "Style".

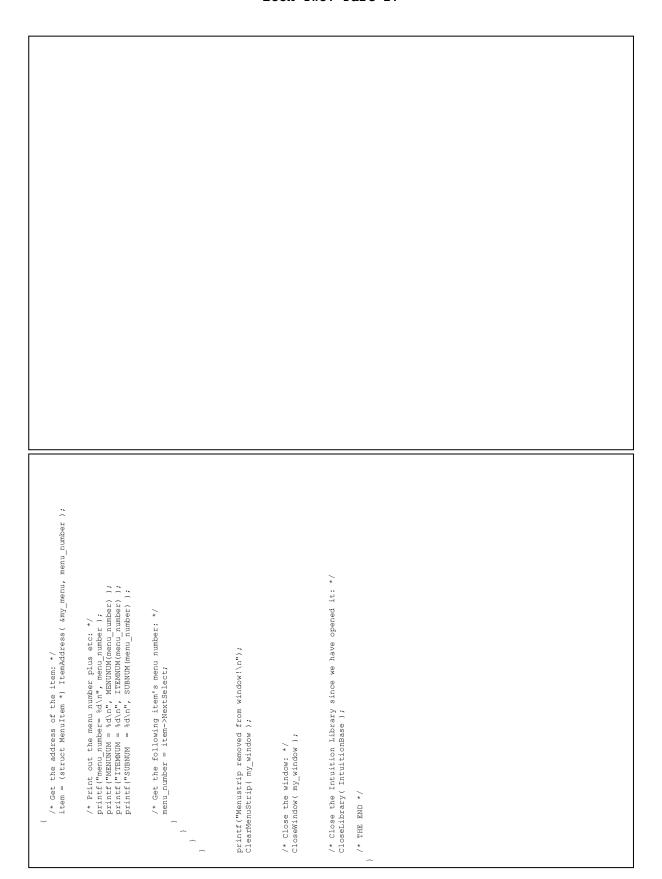

```
/* WILINGONOUNGS */
                                                                                                                                  /* SelectFill, nothing since we complement the col. */
/* Command, no command-ky sequence. */
/* Subtran, ignored by Intuition. */
/* NextSelect, no items selected. */
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             HIGHCOMP, /* complement the colours when highlihted. */ 0x00000001, /* MutualExclude, mutualexclude the first subitem. */ (APTR) &my_third_text, /* ItemFill, pointer to the text. */

```

Example3

This example is very similar to Example2, but the user can this time also access the subitems from the keyboard. For example, to select Bold the user only needs to press the right Amiga key [A] together with the "B" key.

```
/* (Intuition does not care if you write */
/* a capital letter or not. Pressing the */
/* Amiga key together with an 'I' or an */
/* SubItem, ignored by Intuition */
/* SubItem, ignored by Intuition */
/* NextSelect, no items selected. */
                                                                                                                                                                                                                                                                                                                                                                                                                                                              /* THIRD SUBIEM */

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /* THE END */
```

Example4

This program opens a normal window to which we connect a menu strip. The menu consists of two items: Readmode and Editmode. The readmode item is selected and ghosted, and when the user selects the editmode item, it will become disabled (ghosted) while the readmode item will be enabled (not ghosted). This means that if the program is in "readmode", the user should only be able to chose the "editmode", and v.v. The purpose with this program is to show how you can use the OnMenu and OffMenu functions in order to make an "user-friendly interface".

```
/* READMODE IFEM */
                                                                                                                                                                                          \********************************
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                col.

```

Example5

Exactly as Example1 except that we have changed Intuition's checkmark to our own customized "arrow".

Example6

This program opens a normal window to which we connect a menu strip. The menu consists of six small dices which are all action items. This example shows how you can use Images inside a menu.

```
/* SelectFill, nothing since we complement the col. */
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /* PlanePick, affect Bitplane zero. */

```

Example7

This program opens a normal window to which we connect a menu strip. The menu consists of one small action item with two images.

```
0, /* LeftEdge, 0 pixels out. */
0, /* TopEdge, 0 pixels down. */
23, /* Width, 23 pixels wide. */
11, /* Height, 11 lines heigh. */
2, /* Depth, two Bitplanes. */
face_awake_data, /* ImageData, pointer to the image data. */
0x3, /* PlanePick, affect Bitplane zero and one. */
0x0, /* PlaneOOOMff, do not bother about any Bitplanes. */
NULL /* NextImage, no Image structure connected to this one. */
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /* NextItem, this is the one and only item. */
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ..cxtItem, this is the one and only it.

```

Example8

Same as Example1 except that we this time will verify any menu operations. If the user tries to activate this program's menu we check if the position of the pointer is somewhere at the top of the window (less than 10 lines down). In that case the menu operation will continue as normal, otherwise we cancel the menu operation.
