```

Example4

This program will open a normal window which is connected to the Workbench Screen. The window will use all System Gadgets, and will close first when the user has selected the System gadget Close window. Inside the window we have put two Boolean gadgets with the text "GADGET 1" and "GADGET 2".

```

```

Example5

This program will open a normal window which is connected to the Workbench Screen. The window will use all System Gadgets, and will close first when the user has selected the System gadget Close window. Inside the window we have put a Boolean gadget with two Image structures connected to it. Each time the user clicks on the gadget it will change images, lamp on/lamp off.

```
/* The Image data for the light lamp: */ /* Remember that Image data must ALMAYS be placed in chip memory: */ USHORT chip lamp_on_data[84]=

                                               This program will open a normal window which is connected to the Morkbench Screen. The window will use all System Gadgets, and will close first when the user has selected the System gadget Close window. Inside the window we have put a Boolean gadget with two Image structures connected to it. Each time the user clicks on the gadget it will change images, lamp on/lamp off.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            we need to include this file:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /* Since the program is using Intuition #include <intuition/intuition.h>

```

Example6

This program will open a normal window which is connected to the Workbench Screen. The window will use all System Gadgets, and will close first when the user has selected the System gadget Close window. Inside the window we have put a Boolean gadget with a connecting mask. The gadget will only be highlighted when the user selects this gadget while pointing inside the specified (masked) area.

```
/* Flags, for the moment this is the only flag you may use. */ /* Mask, pointer to our bit mask. Only when the user clicks */ /* inside the small area of the gadget it will be selected, */ ^{\prime} inside the small area of the gadget if will be selected, as a selected in the small area.
                                                                                                                                                                                                                                                                                                                                                                             /* Remember! ```

Example7

This program will open a normal window which is connected to the Workbench Screen. The window will use all System Gadgets, and will close first when the user has selected the System gadget Close window. Inside the window we have put a String gadget.

```
/* NextCadget, no more gadgets in the list. */
/* LeftEdge, 68 pixels out. */
/* TopEdge, 30 lines down. */
/* Midth, 198 pixels wide. */
/* Height, 8 pixels lines heigh. */
/* Flags, draw the select box in the complement */
/* colours: Note: it actually only the cursor which */
/* will be drawn in the complement colours (yellow). */
/* if you set the flag GADGINONE the cursor will not be */
/* highlighted, and the user will therefore not be able */
/* to see it. */
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Blocks should be drawn with colour reg. 1 ^{\ast}/ The window will give us a message if the ^{\ast}/
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NULL, /* MutualExclude, no mutual exclude. */

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 gadget:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    exit();
```

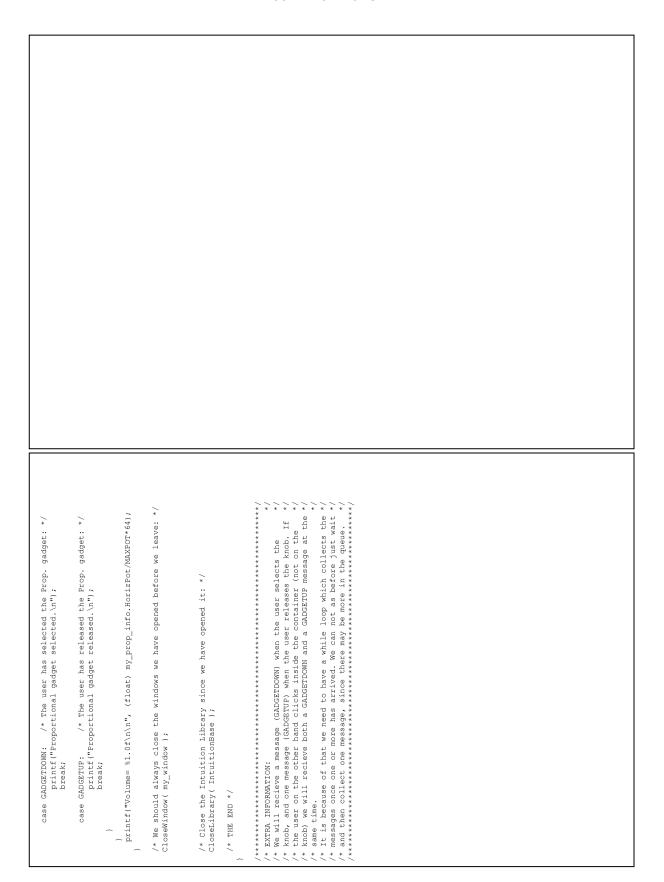

Example10

Same as Example9 except that the Proportional gadget uses a custom image ${\tt knob.}$

```
/* Flags, the knob should be moved horizontally. */
/* HorizPot, start position of the knob. */
/* VertPot, O since we will not move the knob hor. */
/* HorizBody, 64 steps. */
/* VertBody, 0 since we will not move the knob hor. */
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /* GadgetType, a Proportional gadget. */ /* GadgetRender, a pointer to our knob Image str. */ /* SelectRender, NULL since we do not supply the */
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      These variables are initialized and maintained by Intuition: ^{\star}/
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /* NextGadget, no more gadgets in the list. */

Example11

This program will open a normal window which is connected to the Workbench Screen. The window will use all System Gadgets, and will close first when the user has selected the System gadget Close window. Inside the window we have put a Proportional gadget where the knob can be moved both horizontally and vertically.

```
Text should be drawn with colour reg. 0 */ Blocks should be drawn with colour reg. 1 */ The window will give us a message if the */

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               exit();
```

Example12

This program will open a SuperBitmap window which is connected to the Workbench Screen. The window will use all System Gadgets, and will close first when the user has selected the System gadget Close window. Inside the window we have put two Proportional gadgets, one on the right side, and one at the bottom. With help of these two gadgets, the user can move around the BitMap.

This example is for experienced programmers only, since it uses some functions etc which we have not discussed yet. I have, however, included it here since it is a good example on how you can combine Proportional gadgets with SuperBitmap windows.

```
We need to declare an Image structure for the knob, but since */ Intuition will take care of the size etc of the knob, we do not need */ to initialize the Image structure: */
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /* message when the mouse moves while this gadget is */ /\ast activated. */

/* Example12
/* This program will open a SuperBitmap window which is connected to the * * Workbench Screen. The window will use all System Gadgets, and will * * Close first when the user has selected the System Gadgets, and will * * close first when the user has selected the System gadget Close / * window. Inside the window we have put two Proportional gadgets, one * / * on the right side, and one at the bottom. With help of these two * gadgets, the user can move another BitMap.
/* This example is for experienced programmers only, and uses some / * Inctions etc which we have not discussed yet. I have, however, / * included it here since it is a good example on how you can combine * Proportional gadgets with SuperBitmap windows.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /* :uedo

A.5 REQUESTERS

Example1

This example opens a Simple requester by calling the function AutoRequest. It displays a message "This is a very simple requester!", and has only one gadget connected to it (on the right side of the requester) with the text "OK".

```
gad.
                                                                                         for both
                                                                                       Intuition will automatically set the IDCMP flag RELVERIFY for both of the gadgets, so we do not need to set any IDCMP flags if we do
                                                                                                                                                                                                                                                                                                                                                                                        ******************

```

0, 0, JAM1, 6, 3, NULE, "OK",

main()

Example2

Same as Example1, except that the requester displays a message "Do you really want to quit?", and allows the user to choose between "Yes" and "No". The program will continue to reopen the requester until the user has chosen "Yes".

                                                                                                                                                                                                                                                                                                                                                                                                                                                                      while (!AutoRequest(...));
Since AutoRequest returns TRUE ("Yes") or FALSE ("No") we neggate lit(!), and can then use the statement in a while loop. As long as the user selects the "No" gadget AutoRequest returns FALSE which is changed into TRUE, and we stay in the while loop. When the user, on the other hand, selects the "Yes" gadget AutoRequest() returns
                                                                                                                                                                                                                                                                                                                                                                                                    for both

```

Example3

Same as Example1, except that this requester displays a message "Insert a disk in any drive!", and allows the user to choose between "Yes" and "No". The program will continue to reopen the requester until the user has chosen "Yes" or inserted a disk.

/* Example3
/* This example opens a Simple requester by calling the function
/* AutoRequest. It displays a message "Insert a disk in any drive!",
/* and allows the user to choose between "Yes" and "No". The program
/* will continue to open the requester until the user has chosen "Yes",
/* or the user has inserted a disk.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /* FrontPen, colour 0 (blue). */

```

Example4

This program will open a normal window which is connected to the Workbench Screen. The window will use all System Gadgets, and will close first when the user has selected the System gadget Close window. Inside the window we have activated an Application requester with a connecting gadget. The requester will first be satisfied when the user has selected the gadget, and will then be deactivated. The window can now be closed.

```
/* Activation, our program will recieve a message when */ /* the user has selected this gadget, and when the user */ /* has released it. */
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /* a requester. ```

Example5

Same as Example4, except that the requester is first activated when the user double-clicks on the right mouse button. This example shows how to create a Double-menu requester, and how to monitor the IDCMP flags REQSET and REQCLEAR.

```

```

Example6

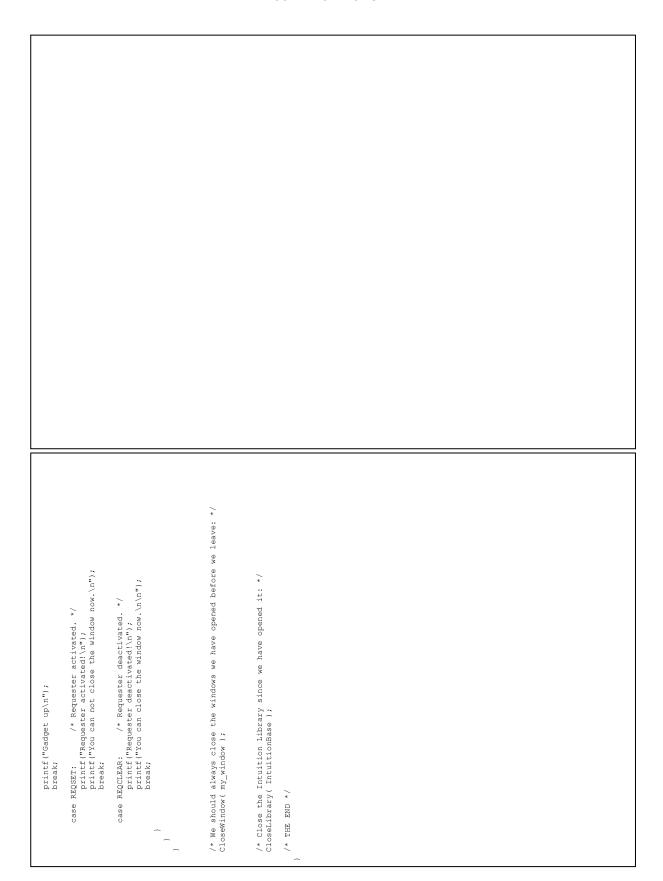

Same as Example5, except that whenever the user double-clicks on the right mouse button, we will receive a REQVERIFY message, and first when we have replied, will the requester be activated. This example shows how to use the REQVERIFY flag.

```
/* (Colour 3 (11)
/* Activation, our program will recieve a message when */
/* the user has selected this gadget, and when the user */
/* has released it. */
/* When the user has selected this gadget, the */
                                                                                                                                                                                                                                                                                                                                                                                                                                                     /* GadgetType, a Boolean gadget which is connected to */

```

Example7

This program will open a normal window which is connected to the Workbench Screen. The window will use all System Gadgets, and will close first when the user has selected the System gadget Close window. Inside the window we have activated an Application requester with three connecting gadgets. Two are Boolean gadgets ("OK and "CANCEL"), and one is a String gadget.

```
/* NextGadget, no more gadgets in the list. */
/* IncfEtEdge, 68 pixels out. */
/* TopEdge, 26 lines down. */
/* Width, 198 pixels wide. */
/* Height, 8 pixels lines heigh. */
/* Height, 8 pixels lines heigh. */
/* Flags, draw the select box in the complement */
/* colours: Note: it actually only the cursor which */
/* will be drawn in the complement colours (yellow). */
/* If you set the flag GADGHNONE the cursor will not be */
/* highlighted, and the user will therefore not be able */
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /* GadgetType, a String gadget which is connected to */ /* a requester.
